

Workloop Clinic HRMS

Feature Specification — UAE Healthcare

Gap Analysis & Implementation Guide

EXISTS	Already built in current codebase	EXTEND	Feature exists, needs clinic-specific additions	NEW	Net-new feature not yet built
[PDF]	Hospital requirements document provided by client	[CSV]	Duty rota template — Dubai Medical University Hospital	[UAE]	UAE Federal Labour Law / DHA regulation

SECTION 1 — Employee & Document Management

1.1	Clinical Credential & Licence Tracking	EXTEND	[PDF #2] [PDF #3]
-----	--	--------	-------------------

WHAT IT IS

The current system tracks passport, visa, and Emirates ID. For UAE healthcare, staff must also hold and renew clinical credentials (BLS, ACLS, PALS, NRP, CME certificates) with specific expiry dates. HR must be notified at least 1 month before any credential expires (per client requirement #3) — via email AND in-app notification.

WHAT IT AFFECTS

- EmployeeModal.jsx — UAE Compliance tab: add "Clinical Credentials" section below existing docs
- employee_documents table — extend document_type values to include: BLS, ACLS, PALS, NRP, CME-Certificate, DHA-Licence, DOH-Licence, MOH-Licence
- notificationStorage.js — generateExpiryNotifications(): add 30-day threshold for clinical docs (minimum per PDF #3); 60d and 90d are optional early warnings
- Email integration — Supabase Edge Function triggered when expiry_date - NOW() <= 30 days (currently only in-app notifications exist)
- NOTE: DHA/MOH/DOH professional licences are stored here as documents; compliance gating (blocking payroll for expired licences) is handled separately in Feature 7.1

IMPLEMENTATION

- Add clinical document types to the upload form dropdown in EmployeeModal Documents tab
- Employee self-upload of these same documents covered separately in Feature 1.2
- Expiry threshold: fire notification at 30 days (mandatory per client); optionally also at 60 days and 90 days for advance warning
- Email trigger: new Supabase Edge Function "notify-expiry" — reads documents expiring within 30 days, sends email to HR_EMAIL env variable
- Notification row: use type = clinical_credential_expiry with relatedEntityId = {docId}_{thr}d for deduplication

1.2 Employee Self-Service Document Uploads

NEW

[PDF #2]

WHAT IT IS

Requirement #2 asks employees to add their own documents from the portal: date of birth, passport (number, validity, scan), visa (number, validity, scan), Emirates ID, BLS, ACLS, PALS, NRP, and CME certificate. Currently the portal is read-only for documents — only HR can upload via the admin panel.

WHAT IT AFFECTS

- EmployeeShell.jsx — add 10th tab "Documents" (currently 9 tabs: Home through Profile)
- New EmpDocuments.jsx — form: document type selector, number field, validity date, file upload
- employee_documents RLS — add INSERT policy for auth_user_id = auth.uid() (currently HR-only)
- New RPC employee_submit_document(p_type, p_number, p_expiry, p_storage_path) — SECURITY DEFINER
- employees table — add date_of_birth DATE column (currently absent; needed for birthday dashboard card in Feature 4.1 too)

IMPLEMENTATION

- Employee picks document type, enters number and expiry, uploads file to Supabase Storage under a pending/path prefix
- RPC writes the employee_documents row with status = pending_verification
- HR sees "Pending" badge in EmployeeModal Documents tab; clicks Approve (moves file, sets verified_at) or Reject (notifies employee with reason)
- Approved documents are then subject to the same expiry notifications as HR-uploaded ones
- DOB entered once in the employee portal profile; stored in employees.date_of_birth and surfaced in the HR dashboard birthday card

1.3 Letter & Certificate Request System

NEW

[PDF #4]

WHAT IT IS

Requirement #4: employees must be able to request standard HR letters from the portal (salary certificate, NOC, experience letter, employment certificate, salary transfer letter). HR must receive an email notification for each request, then generate and return the letter.

WHAT IT AFFECTS

- New DB table: letter_requests (id, employee_id, type, purpose, status, requested_at, completed_at, download_path, user_id)
- EmployeeShell.jsx — request form in Profile tab or a new "Requests" tab
- notificationStorage.js — fire letter_request in-app notification to HR admin on submission
- Email: Supabase Edge Function sends email to HR when a new letter request is created [PDF #4]
- AppShell Dashboard — "Pending Letter Requests" count badge visible to HR

IMPLEMENTATION

- Standard letter types: Salary Certificate (bank / embassy / personal), NOC, Experience Letter, Employment Certificate, Salary Transfer Letter
- Employee selects type + purpose → letter_requests row with status = pending created via RPC
- HR sees the queue, clicks "Generate" → opens print template (same window.open() pattern as EndOfServiceScreen)
- Status → completed; employee sees "Ready — Download" in their portal
- Edge Function: POST to HR email with employee name, letter type, request date on each new submission

SECTION 2 — Attendance & Scheduling

2.1 Clinical Duty Rota (Department-Scoped, Multi-Shift)

EXTEND

[PDF #6] [CSV]

WHAT IT IS

Requirement #6 references the attached CSV as the rota template. The current RosterManager has a basic monthly grid but lacks the clinical details hospitals use: short shift codes, per-employee hours totals, shift-type staff counts, comp-off tracking, mid-month join/leave handling, CSV export in the hospital format, and minimum staffing alerts.

WHAT IT AFFECTS

- shifts table — add code TEXT (short code: D, N, M, A, etc.) and shift_category (morning / afternoon / night)
- roster_assignments — add planned_hours DECIMAL, actual_hours DECIMAL, co_hours DECIMAL
- New table: department_staffing_rules (department_id, shift_category, min_staff) — used by Feature 7.2
- RosterManager.jsx — department-scoped view/publish, compact cell showing short code not full name
- Reports module — new "Staffing Compliance" report tab (days where min coverage met vs missed)

IMPLEMENTATION

- Grid cell view: show shift code (D / N1 / A) in the monthly cell — matches the CSV layout employees are familiar with
- Per-employee totals column: planned_hours and actual_hours for the month (mirrors "Total Hrs / Total Hrs done" in CSV)
- Summary footer rows: count Morning / Afternoon / Night / Off per day — matches the CSV summary rows
- CO/Comp-off balance: when a public holiday falls on an employee's scheduled day, record co_hours; link to leave_balances
- Mid-month joiners: grey out cells before join_date; show "Joined DD/MM" label in first active cell
- CSV export: generate in the exact Dubai Medical University Hospital format (header, staff rows, summary)
- CSV import: parse the same format and bulk-load into roster_assignments

Shift codes and leave codes from the provided CSV template:

Code	Timing	Category	Hrs	Code	Meaning
D	08:00-16:00	Morning	8h	AL	Annual Leave
D1	09:00-17:00	Morning	8h	SL	Sick Leave
D2	10:00-18:00	Morning	8h	ML	Maternity Leave
M	07:30-20:00	Long Day	12.5h	UL	Unpaid Leave
M1	07:45-20:00	Long Day	12.25h	PH	Public Holiday
N	17:30-08:00	Night	14.5h	O	Off / Rest Day
N1	17:45-08:00	Night	14.25h		
A	11:00-20:00	Afternoon	9h		
A1	12:00-21:00	Afternoon	9h		
O	-	Off	-		

2.2 Biometric / Punching Machine Integration

NEW

[\[PDF #7\]](#) [\[PDF #8\]](#)

WHAT IT IS

Requirements #7 and #8: attendance must come from the physical biometric device (fingerprint or card reader), not manual portal clock-in. The employee portal dashboard must show today's actual punch times, and flag late arrivals automatically.

WHAT IT AFFECTS

- clock_events table — add source column (portal | biometric | manual_correction)
- attendance_records table — add source column
- EmpHome.jsx — "Today: Checked in HH:MM | Checked out HH:MM" card from biometric feed [PDF #8]
- EmpHome.jsx — late-arrival alert if punch-in > shift.start_time + grace_minutes [PDF #8]
- New DB table: biometric_devices (id, name, ip_address, api_key, device_type, last_sync_at, active)
- New BiometricSettings.jsx — admin configures device IP, API key, sync interval in Company Settings

IMPLEMENTATION

- Integration model A (Pull): Supabase Edge Function scheduled every 5 minutes polls device API, upserts into clock_events with source = biometric
- Integration model B (Push): device vendor SDK sends a webhook POST to an Edge Function endpoint on each punch event
- Common device vendors in UAE healthcare: ZKTeco, FingerTec, HikVision — all expose REST APIs
- Late flag: when biometric clock_in_time > shift.start_time + grace, insert late_arrival in-app notification to the employee
- Admin AttendanceManager: existing overtime and records tabs already support source column display — just add a filter for biometric vs portal
- EmpAttendance.jsx: replace "Clock In / Clock Out" manual buttons with read-only biometric display when biometric device is configured

2.3 Probation-Aware Leave Rules**EXTEND**

[PDF #9]

WHAT IT IS

Requirement #9: employees on probation must only see leave types applicable during probation. The accrual rate during probation is 2 days/month; after confirmation it becomes 2.5 days/month. If a probation employee tries to apply for a non-eligible leave type, they must see a clear notification: "You are not entitled to paid leave during your probation period." The specific leave types eligible during probation should be configurable by HR — NOT hardcoded.

WHAT IT AFFECTS

- leave_types table — add probation_eligible BOOLEAN DEFAULT false column
- leaveEngine.js — validateLeaveRequest(): check employmentStatus === Probation; reject non-eligible types with the required message
- leaveEngine.js — calculateAnnualLeaveAccrual(): return 2 days/month for Probation status, 2.5 days/month after
- EmpLeave.jsx — filter leave type to only show types where probation_eligible = true when employee status is Probation
- LeaveManager Settings tab — checkbox "Eligible during probation" on each leave type configuration row

IMPLEMENTATION

- HR marks which leave types are allowed during probation (e.g. Sick Leave, Emergency) via the leave type settings — this is configurable, not hardcoded
- EmpLeave: if employee.employmentStatus === Probation and selected type has probation_eligible = false, show inline warning and disable submit
- Warning text verbatim from requirement: "You are not entitled to paid leave during your probation period"
- Accrual rates: update leaveEngine.ACCRUAL_RATES constant — add separate rate for Probation (2d/month) vs Confirmed (2.5d/month)
- Leave balance: when HR confirms employee (status changes from Probation to Full-Time), recalculate balance at the higher rate from confirmation date

2.4 Leave Document Attachments (Mandatory by Leave Type)

EXTEND

[PDF #10]

WHAT IT IS

Requirement #10: for certain leave types, employees must attach a supporting document before the request can be submitted. Example: Sick Leave requires a medical certificate; Maternity Leave requires a birth certificate. HR configures which types require documents.

WHAT IT AFFECTS

- leave_types table — add requires_document BOOLEAN DEFAULT false, document_label TEXT (e.g. "Medical Certificate")
- leave_requests table — add attachment_path TEXT, attachment_filename TEXT
- EmpLeave.jsx — when selected leave type has requires_document = true, show a file upload input; block submission without it
- LeaveManager.jsx requests table — show paperclip icon with download link when attachment_path is set
- LeaveManager Settings tab — "Requires Document" toggle and label field per leave type

IMPLEMENTATION

- HR configures requires_document and document_label per leave type in the Leave Settings tab
- EmpLeave: when a document-required type is selected, show: "Please attach: {document_label}"
- File upload uses Supabase Storage — stored under leave-attachments/{admin_uid}/{emp_id}/{request_id} path
- Submission blocked (button disabled) if leave type requires a document and no file is selected
- LeaveManager: HR can click to download/view the attachment before approving or rejecting the request

SECTION 3 — Org Structure & Approvals

3.1 Department Hierarchy & Org Tree

NEW

[PDF #1]

WHAT IT IS

Requirement #1: "Team and hierarchy management for each department." The current system stores department as a free-text field on each employee with no tree structure and no department heads. Hospitals have formal hierarchies (Medical > Nursing > OPD etc.) that must drive reporting lines and approval chains.

WHAT IT AFFECTS

- New DB table: departments (id, name, parent_id FK self, head_employee_id FK employees, user_id)
- employees table — change department TEXT to department_id UUID FK departments (migration required)
- EmployeeModal.jsx — department field becomes a hierarchical selector showing the dept tree
- LeaveManager / ManagerLeaveQueue — approval chain auto-routes to department head (not just "reporting manager")
- RosterManager.jsx — department filter dropdown populated from departments table
- CompanySettings.jsx — new "Departments" section: add / rename / nest departments, assign head

IMPLEMENTATION

- Org tree rendered as collapsible nested list in CompanySettings; drag-to-rearrange optional (v2)
- Supabase recursive CTE query for department tree: WITH RECURSIVE dept_tree AS (SELECT ... UNION ALL ...)
- Department head auto-routing: on leave/letter/expense request, system looks up departments.head_employee_id for the employee's department
- If department head is on leave: fall back to leave_approval_delegates table (already built)
- EmployeeManager filter sidebar: add "Filter by Department" using the dept tree instead of free-text search

3.2 Multi-Level Approval for All Request Types

EXTEND

[PDF #1]

WHAT IT IS

Requirement #1 says approval workflow is needed for Leave, Documents, Letters "etc." — meaning all employee requests go through department head before reaching HR. Currently only Leave has a 2-level flow (Manager + HR). Letter requests (Feature 1.3) and Expense Claims need the same pattern.

WHAT IT AFFECTS

- letter_requests table — add dept_head_status, dept_head_approved_by, dept_head_approved_at
- expense_claims table — add dept_head_status, dept_head_approved_by, dept_head_approved_at
- ManagerShell.jsx / ManagerLeaveQueue — rename to ManagerRequestQueue; add tabs for Letters and Expenses alongside Leave
- notificationStorage.js — fire dept_approval_required notification to department head on each new letter or expense request
- HR sees requests only after dept_head_status = approved (configurable toggle per request type in Company Settings)

IMPLEMENTATION

- Status flow for letters and expenses: pending → dept_approved → hr_approved / hr_rejected
- Manager sees their team's pending letters and expenses in the manager portal queue tabs
- HR admin can configure "bypass dept approval" per request type if a flat workflow is preferred
- Rejection by dept head: employee notified with reason; request status = dept_rejected; cannot be resubmitted without editing
- Audit trail: each approval or rejection logged with approver email and timestamp

SECTION 4 — HR Dashboard & Analytics

4.1 Clinical HR Dashboard with Drill-Down KPI Cards

EXTEND

[PDF #5]

WHAT IT IS

Requirement #5: HR needs a dashboard showing Total Employees, New Joiners, Birthdays this month, Probation employees, Confirmed employees — with drill-down from each card. The current dashboard has basic stats but lacks DOB tracking, birthday cards, letter request counts, and the clickable drill-down behaviour.

WHAT IT AFFECTS

- Dashboard.jsx — add new stat cards for all clinical KPIs listed below
- employees table — add date_of_birth DATE column (also needed for Feature 1.2 self-upload)
- EmployeeModal.jsx Personal tab — add Date of Birth field
- Each card onClick: calls onNavigate() with a filter param so the target component pre-filters
- EmployeeManager, LeaveManager, AttendanceManager — accept initialFilter prop for drill-down

IMPLEMENTATION

- Birthday card: filter employees where month(dob) = current month; show name + department + date in drill-down list
- Expiring Credentials card: replaces/supplements existing document expiry alert; links directly to the employee's Documents tab
- Pending Letter Requests card: count from letter_requests table (Feature 1.3); visible to HR only
- Late Arrivals card: only meaningful after biometric integration (Feature 2.2); gracefully hidden if no biometric device configured
- Drill-down: onNavigate passes { page, filter } object; target component reads filter in its useEffect to pre-apply

Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'KPI Card' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=8, greek=0, italic=0, link=[], rise=0, text='KPI Card', textColor=Color(1,1,1,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph	Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'Data Source' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=8, greek=0, italic=0, link=[], rise=0, text='Data Source', textColor=Color(1,1,1,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph	Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'Drill-Down' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='Helvetica-Bold', fontSize=8, greek=0, italic=0, link=[], rise=0, text='Drill-Down', textColor=Color(1,1,1,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph
Total Active Employees	employees WHERE active = true	EmployeeManager
New Joiners This Month	employees.join_date in current month	Filtered employee list
Birthdays This Month	employees.date_of_birth (new field)	List with name + dept
On Probation	employment_status = Probation	ProbationModal
Confirmed / Permanent	employment_status = Full-Time	Filtered list
Expiring Credentials < 30d	employee_documents.expiry_date	Documents tab per employee
On Leave Today	leave_requests approved + date range	Leave calendar
Pending Leave Requests	leave_requests.status = Pending	LeaveManager Requests tab
Pending Letter Requests	letter_requests.status = pending	Letter request queue
Staff on Duty Now	clock_events today, no clock-out	Attendance module
Late Arrivals Today	biometric punch vs shift start time	Attendance filtered

SECTION 5 — Payroll & Compensation

5.1 Contract-Type Based Salary Component Distribution

EXTEND

[PDF #12] [UAE]

WHAT IT IS

Requirement #12: salary must be distributed across components (basic, housing, transport, allowances) according to UAE government rules for the employee's contract type. The current PayrollEditor accepts any values without validating component ratios. The UAE MoHRE recommends Basic $\geq$ 60% of total package for most contract types.

WHAT IT AFFECTS

- PayrollEditor.jsx — add validation warning when salary component percentages fall outside recommended ratios
- employees table — add fte DECIMAL DEFAULT 1.0 (full-time equivalent) and employment_category column
- PayrollList.jsx — add Locum / Per-Diem run type (daily rate, no benefits, no leave accrual)
- leaveEngine.js — all accruals pro-rated by fte for part-time staff

IMPLEMENTATION

- Recommended ratios (MoHRE guidance): Basic $\geq$ 60%, Housing $\leq$ 25%, Transport $\leq$ 10%, Other $\leq$ 5% of total package
- Show amber warning in PayrollEditor header if any employee's component split is outside recommended range; not a hard block
- Locum run: new payroll_runs.run_type = locum — includes only employees with employment_category = locum; entries use daily_rate $\times$ days_worked
- Part-time FTE: contracted_hours / 48 (UAE standard week) = fte; annual leave accrual and gratuity scaled by fte
- Free-zone employees (e.g. Dubai Healthcare City DHCC): flag with different WPS bank routing code requirement in the SIF generator

5.2 Overtime → Payroll Auto-Integration**EXTEND**

[UAE]

WHAT IT IS

Overtime calculation already exists in full (attendanceEngine.js: Art. 19 at 1.25x, Art. 20 rest-day at 1.5x, Art. 26 night shift at 1.25x; AttendanceManager has an Overtime tab with approval workflow). However, approved overtime amounts are NOT automatically carried into PayrollEditor — HR currently has to manually add them as deduction/allowance entries. For a clinic where nursing staff regularly work overtime, this manual step is error-prone and time-consuming.

WHAT IT AFFECTS

- PayrollEditor.jsx — auto-load approved overtime totals from attendance_records for each employee in the payroll period
- attendanceStorage.js — new function getApprovedOvertimeForPeriod(companyId, period): returns per-employee OT hours and amounts
- PayrollEditor AllowDeductPanel — pre-populate an "Overtime Pay (Art. 19/20)" line item automatically when OT > 0
- attendance_records table — add payroll_run_id column to mark which records have been included in a payroll run

IMPLEMENTATION

- On PayrollEditor load: call getApprovedOvertimeForPeriod(period) and merge results into entry.otherPay or a dedicated OT field per employee
- Show an info panel (green, like the Expenses panel) listing OT hours and pre-computed amounts pulled from Attendance
- HR can override: OT amounts are editable after auto-population — the Attendance value is a starting point
- After payroll submission: mark the included attendance_records.payroll_run_id = run.id to prevent double-counting in future runs
- Night shift premium (Art. 26): hasNightShiftHours() helper already exists; OT type = NIGHT_SHIFT auto-detected from clock times

SECTION 6 — Employee Performance & Development

6.1 Employee Evaluation & Appraisal Module**NEW**

[PDF #11]

WHAT IT IS

Requirement #11: Employee Evaluation & Management Module. Structured periodic performance reviews are standard in UAE healthcare — mandatory for JCIA/JCI-accredited facilities. The system needs template-based appraisals, self-assessment, manager scoring, and HR sign-off.

WHAT IT AFFECTS

- New DB table: appraisal_templates (id, name, cycle_months, competencies JSONB, rating_scale_max, user_id)
- New DB table: appraisals (id, employee_id, template_id, period_start, period_end, status, self_score, manager_score, final_score, user_id)
- New DB table: appraisal_competency_scores (appraisal_id, competency_key, self_rating, manager_rating, comments)
- New AppraisalManager.jsx (admin) — template builder, active cycle view, score summary
- New EmpAppraisal.jsx (employee portal tab) — self-assessment form, past results history
- ManagerShell.jsx — new "Appraisals" tab for managers to score their direct reports
- Dashboard.jsx — "Appraisals Due" alert (probation ending or annual cycle due within 14 days)

IMPLEMENTATION

- Template builder: HR defines competency categories (Clinical Skills, Communication, Teamwork, Attendance, Compliance) with weights
- Auto-trigger: when probation_end_date - TODAY <= 14 days, auto-create an appraisal record for probation review
- Status flow: draft → self_assessment_open → manager_review → hr_final → closed
- Score: weighted average of rated competencies → final_score; HR sets pass threshold per template
- PDF export: print appraisal report to employee file using the same window.open() pattern as payslips
- Probation outcome: confirming employee or extending probation can be triggered directly from the appraisal result screen

SECTION 7 — Compliance & Regulatory (UAE Healthcare)

7.1 DHA / MOH / DOH Professional Licence Compliance Gate**NEW**

[UAE]

WHAT IT IS

All clinical staff practising in Dubai must hold a valid DHA (Dubai Health Authority) licence; Abu Dhabi requires DOH; other Emirates require MOH. These licences are stored as documents in Feature 1.1, but this feature adds the compliance gate: the system actively blocks payroll generation and roster publishing for employees with expired professional licences. Feature 1.1 = document storage; Feature 7.1 = enforcement.

WHAT IT AFFECTS

- employees table — add licence_authority (DHA | DOH | MOH | HAAD | None), licence_number TEXT, licence_expiry DATE, licence_status computed column
- PayrollList.jsx — before generating SIF, check all included employees: if licence_status = expired → block or warn with list of non-compliant staff
- RosterManager.jsx — publishRoster() validation: flag employees assigned to shifts who have expired licences
- Dashboard.jsx — "Non-Compliant Staff" card: count of employees with expired or expiring (<30d) licences
- Notification chain: fire clinical_licence_expiry notifications at 60d / 30d / 14d / expiry — separate from document notifications in Feature 1.1

IMPLEMENTATION

- Licence status derived dynamically: active (> 30d remaining), expiring (1–30d), expired (<= 0d)
- Payroll block: when any active employee has licence_status = expired, show a non-dismissible warning listing affected employees; HR must either remove them from the run or confirm override with reason
- Roster block: publishRoster() validates all assigned employees in the month; surfaces failing employees per day per department
- Override: HR can mark a compliance exception with a mandatory reason text — logged to a compliance_overrides audit table
- Licence data entry: add a "Professional Licence" section in EmployeeModal UAE Compliance tab with authority selector, licence number, and expiry date (separate from the document file upload in Feature 1.1)

7.2 Shift Minimum Staffing Compliance

NEW

[CSV] [UAE]

WHAT IT IS

UAE healthcare regulations (DHA Facility Standards) require minimum staffing ratios per department per shift. The CSV shows hospitals already track morning/afternoon/night/off counts manually per day. This feature automates the check and blocks under-staffed rosters from being published.

WHAT IT AFFECTS

- New DB table: department_staffing_rules (department_id, shift_category, min_staff, effective_from, effective_to, user_id)
- RosterManager.jsx — run staffing validation before publish; list days and shifts that fall below min_staff
- CompanySettings.jsx — new "Staffing Rules" sub-section in Departments tab to configure min_staff per dept/shift
- Reports module — new "Staffing Compliance" report tab (heatmap: days x departments, green/amber/red by coverage ratio)

IMPLEMENTATION

- HR sets minimum staff per department per shift category (morning / afternoon / night) in Company Settings
- publishRoster(): count assigned (non-off) staff per day per department per shift_category and compare to rules
- If any day fails: modal showing table of failing days with actual vs required count; cannot publish until resolved or overridden with reason
- Staffing report: month-view heatmap — each cell shows actual/required; red = below minimum, amber = at minimum, green = above
- Summary row in RosterManager grid (below employee rows): Morning count / Afternoon / Night / Off — mirrors the CSV summary rows employees recognise

SUMMARY — Priority & Effort Matrix

#	Feature	Status	Effort	P
1.1	Clinical credential tracking (BLS, ACLS, CME, DHA lic.)	EXTEND	M	P1
1.2	Employee self-upload documents (portal)	NEW	M	P1
1.3	Letter & certificate request system	NEW	M	P2
2.1	Clinical duty rota (dept-scoped, shift codes, CSV I/O)	EXTEND	L	P1
2.2	Biometric / punching machine integration	NEW	L	P1
2.3	Probation-aware leave rules (configurable per type)	EXTEND	S	P1
2.4	Leave document attachments (mandatory by leave type)	EXTEND	S	P2
3.1	Department hierarchy & org tree	NEW	L	P2
3.2	Multi-level approvals for all request types	EXTEND	M	P2
4.1	Clinical HR dashboard with drill-down KPI cards	EXTEND	M	P1
5.1	Contract-type salary distribution validation	EXTEND	M	P2
5.2	Overtime → Payroll auto-integration	EXTEND	M	P1
6.1	Employee evaluation & appraisal module	NEW	XL	P3
7.1	DHA/MOH/DOH licence compliance gate (payroll & roster)	NEW	M	P1
7.2	Shift minimum staffing compliance enforcement	NEW	M	P2

Effort: S = days M = 1–2 weeks L = 2–4 weeks XL = 4+ weeks **Priority:** P1 = Required to go live P2 = Needed within 3 months P3 = Nice-to-have
